See what everyone is talking about

T

here's more to most conferences than meets the ear. One look at the new DIS DC 6990P Touchscreen Conferencing™ unit, and the way you look at meetings will change completely. Its innovative colour touchscreen puts new vistas of information at your fingertips – quickly and easily. The DC 6990P allows meeting participants not only to hear what's being said, but also to request and view the meeting agenda, speech times, supporting data, delegate information, messages and much more. Even vote on proposed resolutions and see the results onscreen.

Whether it's used by the chairman or by delegates, the DC 6990P will help participants focus on and participate in meetings more fully than ever before. For conference managers, it provides an overview of everything that's happening to help monitor and control an efficient meeting. For delegates, the DC 6990P gives a clear picture of where they stand in the proceedings – who's speaking, what's being discussed, when they're scheduled to speak. In short, it's easy to see why Touchscreen Conferencing with the DC 6990P has the power to transform the way people experience meetings.

Whether it's used by the chairman or by delegates, the DC 6990P will help participants focus on and participate in meetings more fully than ever before.

Eliminate thousands of buttons at a stroke

The DC 6990P is tangible evidence that less is more. It's the first conference unit ever with a built-in touchscreen, which – at the tap of a finger – eliminates high-tech distractions, like rows of confusing control buttons and keyboards. Thanks to our SW 6000 conference management software, the DC 6990P – with only two simple manual buttons, a flexible microphone and a colour touchscreen – provides a surprisingly intuitive and easy way to participate in all aspects of a conference. The DC 6990P streamlines and simplifies the way people experience meetings and makes for more efficient and productive conference environments. It also accommodates a wide variety of language preferences: delegates who do not read English can easily receive all information in another language of their choice.

What isn't surprising is that Touchscreen Conferencing™ comes to you from DIS, a world leader in advanced conference elec–tronics. The DC 6990P's innovative touchscreen demonstrates the dedication to technical excellence that you'd expect from a company which invests more than 10% of annual revenue in R&D. In fact, DIS is widely recognized not only for technical innovation – such as the launch of the first fully digital 32-channel conference system – but also for forward-looking business practices, such as its non-compete distributor policy.

The DC 6990P streamlines and simplifies the way people experience meetings and makes for more efficient and productive conference environments.

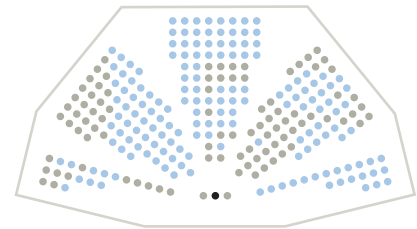

Finally something everybody agrees on

Touchscreen Conferencing™ is simply a better way to bring people together, wherever they meet – from universities and courtrooms to conference centers and councils. In all of these settings, the DC 6990P offers advantages everybody can agree on. Attractive design, for one thing. Flexibility, for another: while it's streamlined and portable, the DC 6990P can also be used as a fixed conference station, as in parliamentary or other permanent settings. Additionally, there is no need for different types of units for different purposes – everyone from conference managers and delegates to secretaries and technicians can easily and effectively use the same device.

Most important, the DC 6990P – despite its one-of-a-kind touchscreen technology – is competitively priced and affordable across a broad range of uses. Features such as Internet streaming capability, combined with our SW 6000 conference management software, enable the DC 6990P to keep pace with the rapid evolution of conference technology and to be adapted to specific customer needs. Finally, the new DC 6990P conference unit combines innovation with reliability – it's designed and backed by DIS, a company with a solid record of stability and customer support.

While it's streamlined and portable, the DC 6990P can also be used as a fixed conference station, as in parliamentary or other permanent settings.
