

Soundfield

For people to fully be enriched by an interaction, they need to hear and be heard. Often the interactions in classrooms, training rooms, and meeting rooms are conducted without consideration to amplifying the voice or other sound sources. Studies have shown that by boosting the audio levels in small to medium size rooms to create a soundfield, you can increase retention by as much as 30%. Listen's simple and unobtrusive equipment delivers the audio structure your room needs to raise the overall sound intelligibility of all your sound sources. Participants will be focused and engaged; your voice won't be strained from talking loudly, resulting in a productive and enriching interaction for all.

Don't miss a single sound. **Listen**[®]

Bring Learning to Life

Highlights

- Simple, affordable way to improve the quality of sound and bridge multiple audio sources within your small room setting.
- Makes meetings more effective and dynamic.
- Has been shown to increase classroom productivity up to 30%.
- Exceptional world-wide service and support.

"I teach my students critical tools for their success. Now that students can hear me clearly - even over the air conditioner - they are more fully engaged".

- Librarian Mary McAskill, Sands Middle School
